Exemplu răspuns

• Grila

Avem urmatoarele linii de cod:

```
1. class Program
2.
3.
             static void Main(string[] args)
4.
5.
            int x1(int x) => -x;
6.
7.
            bool x2(int x) { return x \% 2 == 1; }
8.
9.
            int x3(int x)
10.
11.
              for (int i = 2; i \le x; i++)
                 if (x \% i == 0) return i;
12.
13.
              return -1;
14.
            }
15.
16.
            bool x4(int x) { return x < 0; }
17.
18.
            int[] scores = new int[] { 1, 2, -3, 4, 5, 6, 7, -8, -9, 10, -28, 35};
19.
20. }
```

Care linie de cod afiseaza cel mai mic divizor(!=1) al numerelor pozitive impare

```
a) scores .Where(x => x4(x1(x)))
.Select(x3)
.Where(x=>!x4(x))
.Where(x2)
.ToList().ForEach(x => Console.Write(x + " "));
b) scores .Where(x => x4(x3(x)))
.Select(x1)
```

```
. Where(x => !x4(x))
              .Where(x2)
              .ToList().ForEach(x => Console.Write(x + " "));
              .Where(x => x4(x1(x)))
c)
     scores
              .Where(x = > !x4(x))
              .Where(x2)
              .ToList().ForEach(x => Console.Write(x + " "));
              .Where(x => x4(x1(x)))
d)
     scores
              .Select(x2)
              .ToList().ForEach(x => Console.Write(x + " "));
   Răspuns corect
   A)
```

• Justificarea răspunsului

```
Where(x => x4(x1(x))) -> selecteaza numai numerele pozitive
Select(x2) -> le mapeaza la primul divizor !=1 sau -1
Where(x4) -> selecteaza numai numerele care sunt pozitive dupa mapare
Where(x3) -> le selecteaza pe cele impare
```
