```csharp
class Program
    {
        delegate int StringPredicate(string s);

        static void Main(string[] args)
        {

            List<string> listElev = new List<string>();
            listElev.Add("Ana");
            listElev.Add("Ben");
            listElev.Add("John");
            listElev.Add("Mary");
            listElev.Add("Andrew");
            listElev.Add("Ashley");

            StringPredicate testIfTeenAger = delegate (string str) {

                return str.StartsWith("A") && (!str.StartsWith("As"));
            };

            List<string> lstNou = listElev.Where(s
=>testIfTeenAger(s)).ToList<string>();
            Console.WriteLine(listElev.Where(s => testIfTeenAger(s)).Count());
            foreach(string s in lstNou)
                Console.WriteLine(s);

}

}
```

Ce afiseaza aceasta clasa la rulare?

a)3

   Ana

   Andrew

   Ashley

b)Ben

   John

   Mary

c)2

   Ana

   Andrew

d)nici una dintre variante

Explicatie:Delegate-ul StringPredicate returneaza valori de tipul
int si trebuie sa fie de tipul bool pentru where

Dificultate:Medium
